

**Foundation for  
Integrated Transport**

## **FIT FELLOWSHIP 2020: TRANSPORT AND CLIMATE CHANGE**

**£70,000 over two years**

Closing date for applications: 18 May 2020

Decisions made in June 2020

Fellowship to start in September 2020

Transport is the UK's biggest contributor of greenhouse gas emissions, with the large majority coming from road transport. And while UK CO<sub>2</sub> emissions have fallen 38% since 1990, in road transport they have continued to grow.

Delivering transport carbon reductions requires immediate, innovative and radical thinking in terms of transport and planning policies, technical interventions and changes in our travel behaviour. Steady progress is no longer enough.

The FIT Fellowship for Transport and Climate Change will develop the skills and expertise of activists uncovering and developing solutions to this problem. The Fellowship could take a variety of approaches, focusing on measures to reduce our dependency on cars; improving the quality and accessibility of alternatives including public transport, walking and cycling; and designing our towns and cities to make this shift a reality.

### **Outcomes**

The Fellowship will run for two years, offering £35,000 per year and will result in a comprehensive report, deliverable proposals and options for funding for delivery. The report and proposals will be officially launched at an event co-organised with FIT.

FIT will also help identify mentors; provide access to other FIT fellows with similar interests; help with the publication of results; and provide a logo for fellows to use.

### **Who should apply**

Applications are welcomed from every career stage, including post-graduates, researchers and professionals.

Candidates should be based in the UK and focus on UK solutions. But the research could explore and bring ideas from overseas.

### **How to apply**

Applicants are invited to contact [admin@integratedtransport.co.uk](mailto:admin@integratedtransport.co.uk) to arrange an initial discussion with trustees before emailing a one-page application outlining the applicant's background, experience, the project's aims and outcomes and a referee who will provide a detailed reference on the applicant's transport credentials.

Visit [www.integratedtransport.com](http://www.integratedtransport.com) for more information about FIT and the fellowship programme.
